Columbia University Medical Center

Consent Form to Participate in a Research Study and HIPAA Authorization

1. Title of research study and general information

Study title: Columbia Center for Children's Environmental Health

Study number: IRB-AAAA6110

Participation duration: 30 minutes

Anticipated number of research participants at this site: 100

2. Researchers' contact information

Principal Investigator: Julie Herbstman, PhD

Phone Number: 917-575-2884

Study Coordinators:

- Diurka Diaz: 347-931-2622
- Gladys Badia: 917-891-1306

3. What information is on this form?

We are asking you to take part in a research study.

This form explains why we are doing this study and what you will be asked to do if you choose to be in this study. It also describes the way we (Researchers) would like to use and share information about you.

Please take the time to read this form. We will talk to you about taking part in this research study. You should ask us any questions you have about this form and about this research study.

You do not have to participate if you don't want to.

4. Why is this study being done?

We are doing this research study to find out how prenatal and early life environmental exposures are associated with health outcomes in adolescence and early adulthood.

5. What will I be asked to do if I choose to be in this study?

We will ask you to complete a survey / answer questions that is anticipated to take 5 minutes

We will collect blood and urine samples from you.

Your blood sample may be used for different types of tests. Some tests may look for chemicals or other substances in your blood that could affect your health. Other tests may look at genetic factors and examine your DNA.

DNA is the genetic material in your cells that acts like an instruction guide for how your body works. These tests can help researchers understand how the environment and other factors may influence health.

Genetic factors are traits you can inherit from your parents, and they can run in families. If you join this study, we will collect a sample from you and look at your genetic information. To protect your privacy:

- Your sample will be labeled with a special code number, not your name.
- Your name will not be connected to that code.
- Your sample will be studied together with many other people's samples, and the results will be grouped together so that no one can tell which results belong to you.

Columbia University IRB
IRB-AAAA6110 (Y32M03)
IRB Approval Date: 11/05/2026
For use until: 03/12/2027

- You will not get your individual genetic results because researchers do not know what the results would mean for your health.

You should also know that insurance companies sometimes use information from genetic testing to deny coverage to applicants. The risk of this affecting you is low because this is genetic research, not a clinical genetic test. Therefore, if you agree to participate and are asked whether you have had genetic testing, you should answer no, since your participation in this genetic research is not the same as genetic testing.

6. Are there any risks?

The risks of having blood drawn include soreness and bruising at the place where the needle went in and sometimes there may be discomfort during the procedure. After the fasting blood draw, some people may feel dizzy or lightheaded. The amount of blood to be taken is not considered to be a significant amount and is therefore not expected to have any significant risk.

You can choose to skip questions if they make you uncomfortable.

A risk of taking part in this study is the possibility of a loss of confidentiality or privacy. Loss of privacy means having your personal information shared with someone who is not on the study team and was not supposed to see or know about your information. The study team plans to protect your privacy. Their plans for keeping your information private are described in section 8 of this consent form.

7. Are there any benefits?

There may be no direct benefits to you as a participant in this study. However, we hope to learn more about prenatal and early life environmental exposures on health in adolescence and early adulthood.

This study will not directly benefit you. However, information that is learned may increase our understanding of genetic testing and results of genetic tests, and help patients in the future.

8. What about my privacy?

Every effort will be made to keep your personal information confidential. However, we cannot guarantee total privacy.

The data collected will be given a code number and separated from your name or any other information that could identify you. The research file that links your name to the code number will be kept in a password protected database. Only the Principal Investigator, Co-Investigator, and the study staff will be able to see this file.

If information from this study is published or presented at scientific meetings, your name and other personal information about you will not be used.

The following people and/or agencies will be able to look at, copy, use and share your research information:

- The investigator, Columbia University Medical Center and study staff and other professionals who may be evaluating the study
- Authorities from Columbia University, including the Institutional Review Board ('IRB'). An IRB is a committee organized to protect the rights and welfare of people involved in research.

Study Communications and Future Contact

The study team may contact you by phone, text message, email, or direct mail regarding study visits, questionnaires, reminders, newsletters, community engagement activities, and other study-related information. We will use the contact information you provide and your preferred communication methods. You may provide or update your contact information and communication preferences on the Contact Information Form or directly with study staff.

The procedures described in this consent form relate to the current study. You may also be contacted about future research opportunities if you agree to future contact below.

Columbia University IRB
IRB-AAAA6110 (Y32M03)
IRB Approval Date: 11/05/2026
For use until: 03/12/2027

Columbia-approved communication and data management systems may be used to send messages, survey links, and other study information. We use REDCap to manage study information and study-related communications. Text messages sent from REDCap are delivered through Twilio, a text-messaging service. These messages will not contain personally identifiable or sensitive study information. Your mobile phone number is the only personally identifiable information transmitted through Twilio and is required to deliver the message.

Communication Preferences and Future Contact

1. SMS Text Messages

Do you agree to receive SMS text messages about study-related activities, including study visits, reminders, questionnaires, survey links, newsletters, community engagement activities, and other study information?

☐ YES ☐ NO

2. Future Contact

We may contact you about future CCCEH or partner research studies. Each study will have its own consent form, and study staff will explain the study before you decide whether to participate. You are free to decline.

Do you agree to be contacted about future research opportunities?

☐ YES ☐ NO

If you agree to future contact, we may contact you using your preferred communication methods, including SMS text messages if you agreed to receive them above.

You may ask us to stop contacting you through a particular method at any time without affecting your participation in the study. To stop text messages, you may reply STOP or ask study staff to stop texting you. To stop phone calls, emails, or direct mail, you may ask study staff to stop using that communication method.

You may change your mind and revoke (take back) this consent and authorization at any time and for any reason. To revoke this consent and authorization, you must contact the Principal Investigator, Julie Herbstman at 917-575-2884.

9. Will I get paid or be given anything to take part in this study?

Compensation for this study will be provided in the form of an electronic Gift Card via TruCentive.com.

- If you complete the visit in person, you will receive a $200 gift card and round trip transportation to and from the Center.
- If you complete the visit remotely, you will receive a $100 gift card.

You may choose to receive this electronic gift card by email, SMS text message or both methods. Based on your preference, we will provide your email and/or SMS text number to TruCentive.com. Some gift cards may use a 3rd party for activation and may require you to provide personal information.

Please note, for certain types of compensation (Venmo/Paypal), information about you (including your bank account, physical address or credit card information) will need to be entered into a secure third-party system. There are protections in place to safeguard your information and the research team will NOT have access to any of the information you provide for compensation purposes.

Additional instructions on how to receive compensation through TruCentive will be provided to you.

10. Will I incur costs if I take part in this study?

There will be no costs to you for being in this study.

Columbia University IRB
IRB-AAAA6110 (Y32M03)
IRB Approval Date: 11/05/2026
For use until: 03/12/2027

11. What are my rights if I take part in this study?

Taking part in this study is your choice. You can decide not to take part in or stop being in the study at any time. Your choice will not change the treatment you receive from doctors and staff at Columbia University Medical Center and New York-Presbyterian Hospital.

If you choose to withdrawal from the study, we will continue to use the data you provided on the questionnaire indefinitely.

12. Who can I call if I have questions?

You may call Diurka Diaz at telephone # 347-931-2622 or Gladys Badia at telephone # 917-891-1306 if you have any questions or concerns about this research study.

If you have any questions about your rights as a research participant, or if you have a concern about this study, you may contact the Institutional Review Board listed below.

Institutional Review Board
Columbia University Medical Center
154 Haven Avenue, 2nd Floor
New York, NY 10032
Telephone: (212) 305-5883
irboffice@columbia.edu

13. Statement of consent and signatures

HIPAA authorization

The health information that may be used and disclosed includes:

- all information collected during the research described in the Informed Consent Form above; and
- health information in my medical records that is relevant to the research.

The providers may disclose health information in my medical records to:

- the Researchers;
- the sponsor of the Research, NIH, and its agents and contractors.

Why will this information be used and/or given to others?

- to do the research,
- to study the results, and
- to make sure that the research was done right.

If the results of this study are made public, information that identifies you will not be used.

What if I decide not to give permission to use and give out my child’s health information?

- Then you will not be able to be in this research study.

May I withdraw or revoke (cancel) my permission?

- This permission will not stop automatically. You may change your mind and take back this Authorization at any time and for any reason.
- To revoke this Authorization, you must write to Privacy Officer, Columbia University, 630 West 168th Street, Box 159, New York, N.Y. 10032.
- However, if you revoke this Authorization, you will not be allowed to continue taking part in the research. Also, even if you revoke this Authorization, the Researchers and the Sponsor may continue to use and disclose the information they have already collected as permitted by the Informed Consent Form.
- When you withdraw your permission, no new health information identifying you will be gathered after that date

Columbia University IRB
IRB-AAAA6110 (Y32M03)
IRB Approval Date: 11/05/2026
For use until: 03/12/2027

Statement of consent and HIPAA authorization

I have read this consent form and HIPAA authorization. The research study has been explained to me. I agree to be in the research study described above.

A copy of this consent form will be provided to me after I sign it.

By signing this consent and HIPAA authorization form, I have not given up any of the legal rights that I would have if I were not a participant in the study.
